

Entering Commands

Build and run MATLAB® statements

While working in MATLAB, you issue commands that create variables and call functions. For an introduction, see [Enter Statements in Command Window](#).

Functions

ans	Most recent answer
clc	Clear Command Window
diary	Log Command Window text to file
format	Set output display format
home	Send cursor home
iskeyword	Determine if input is MATLAB keyword
more	Control paged output in Command Window
commandwindow	Enter statements at the command line
commandhistory	View previously run statements

Objects

DisplayFormatOptions	Output display format in Command Window
--------------------------------------	---

Topics

[Enter Statements in Command Window](#)

Enter individual statements in the Command Window while working in MATLAB.

- [Continue Long Statements on Multiple Lines](#)
- [Variable Names](#)
- [Check Syntax as You Type](#)
- [Autocomplete Code Using Suggestions](#)
- [Case and Space Sensitivity](#)

[Format Output](#)

Format the output display in the Command Window and the Live Editor.

[Calling Functions](#)

MATLAB provides a large number of functions that perform computational tasks. To call a function, enclose its input arguments in parentheses.

- [Name=Value in Function Calls](#)

- [Ignore Function Outputs](#)
- [Choose Command Syntax or Function Syntax](#)

Stop Execution

Stop the execution of a MATLAB command.

Create and Run Favorite Commands

MATLAB favorite commands are an easy way to run a group of MATLAB commands that you use regularly.

Write to a Diary File

Use the `diary` function to keep an activity log of your MATLAB session.

Find Text in Command Window or History

Search text currently in the Command Window or Command History.

Modify Command Window Settings

Specify appearance and behavior of the Command Window and its output.

Modify Command History Settings

Specify how often to save statements to the Command History and the types of statements to exclude.

Modify Keyboard Settings

Settings for delimiter matching in the Command Window, Editor, and Live Editor.

Troubleshooting

Resolve Error: Unrecognized Function or Variable

Troubleshoot error message related to unrecognized function or variable.
