

grabcode

Extract MATLAB code from file published to HTML

Syntax

```
grabcode filename
grabcode url
code = grabcode(filename)
```

Description

`grabcode filename` copies the MATLAB® code from the HTML file `filename` and pastes it into an untitled document in the Editor. Use `grabcode` to get MATLAB code from published files when the source code is not readily available. `filename` is the HTML file created by publishing a MATLAB code file (*.m) or exporting a live script (*.mlx) to HTML. In both cases, the MATLAB code from the file appears as HTML comments at the end of `filename`.

`grabcode url` copies MATLAB code from the page or file specified by `url` and pastes it into an untitled document in the Editor.

`code = grabcode(filename)` returns the MATLAB code from `filename` to a character array.

Examples

[collapse all](#)

Get MATLAB Code from HTML File

Use `grabcode` to get MATLAB® code from an existing HTML file.

Extract the MATLAB code from `my_sine_wave.html` into the variable `code`. To view the contents of the file, double-click `my_sine_wave.html` in your current folder.

[Open in MATLAB Online](#)

[Copy Command](#)

```
code = grabcode('my_sine_wave.html')
```

[Get](#) ▼

```
code =
    %% Plot Sine Wave
    % Calculate and plot a sine wave.

    %% Calculate and Plot Sine Wave
    % Calculate and plot |y = sin(x)|.

    function sine_wave_f(x)

    y = sin(x);
    plot(x,y)

    %% Modify Plot Properties
```

```
title('Sine Wave', 'FontWeight','bold')
xlabel('x')
ylabel('sin(x)')
set(gca, 'Color', 'w')
set(gcf, 'MenuBar', 'none') '
```

Input Arguments

[collapse all](#)

filename — Name of HTML file
character vector | string scalar

Name of the HTML file, specified as a character vector or string scalar.

Example: `grabcode('name.html')`

url — Web page address or location of the HTML file
character vector | string scalar

Web page address or location of HTML file, specified as a character vector or string scalar.

Example: `grabcode('https://www.mathworks.com/matlabcode.html')`

Limitations

- [MATLAB Online™](#) only supports copying MATLAB code into a character array using the syntax `code = grabcode(filename)`. Copying MATLAB code from an HTML page or file into an untitled document in the Editor is not supported.

Version History

Introduced before R2006a
