

Workspace Variables

The *workspace* contains variables that you create within or import into MATLAB® from data files or other programs. For example, these statements create variables A and B in the workspace.

```
A = magic(4);  
B = rand(3,5,2);
```

You can view the contents of the workspace using `whos`.

```
whos
```

Name	Size	Bytes	Class	Attributes
A	4x4	128	double	
B	3x5x2	240	double	

The variables also appear in the Workspace panel on the desktop.

The screenshot shows the MATLAB Workspace panel. It has a title bar 'Workspace' with a dropdown arrow and a menu icon. Below the title bar is a table with four columns: Name, Value, Size, and Class. There are two rows of variables: A and B. Variable A has a value of '4x4 double', size of '4x4', and class of 'double'. Variable B has a value of '3x5x2 double', size of '3x5x2', and class of 'double'. Each row has a small grid icon to the left of the variable name.

Name	Value	Size	Class
A	4x4 double	4x4	double
B	3x5x2 double	3x5x2	double

Workspace variables do not persist after you exit MATLAB. Save your data for later use with the `save` command,

```
save myfile.mat
```

Saving preserves the workspace in your current working folder in a compressed file with a `.mat` extension, called a MAT-file.

To clear all the variables from the workspace, use the `clear` command.

Restore data from a MAT-file into the workspace using `load`.

```
load myfile.mat
```
