

clc

Clear Command Window

Syntax

`clc`

Description

`clc` clears all the text from the Command Window, resulting in a clear screen. After running `clc`, you cannot use the [example](#) scroll bar in the Command Window to see previously displayed text. You can, however, use the up-arrow key ↑ in the Command Window to recall statements from the command history.

Use `clc` in a MATLAB® code file to always display output in the same starting position on the screen.
